My Dog Found a Nest of Bunnies

Steps to protect the nest: Use chicken wire to construct a fence that will surround the nest. The fence must be of sufficient diameter so your dog cannot reach the nest by placing his paws under the fence. Cut 2 arches in the bottom of the fence and on opposite sides of the fence, each 8 inches tall by 6 inches wide. Stake the fence down and leave the nest and bunnies alone. Mom only comes once or twice a day to feed them. You will probably not see the mother rabbit but this does not mean they are orphaned. Resist the urge to check on the bunnies as checking on them will increase the chance that the nest will be found by a predator.
